

Renaming page sets

Page sets can only be deleted if they are not linked to an imposition plan. To break the link between an imposition plan and a page set, remove the imposition plan.

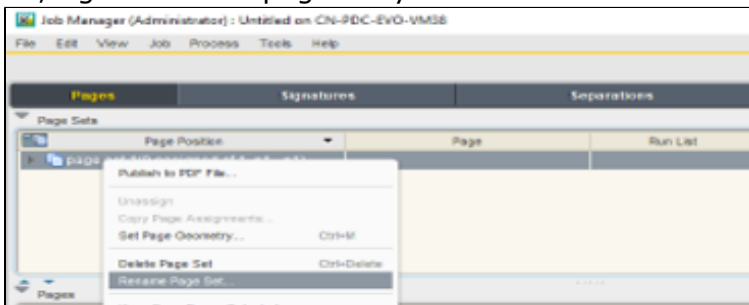

1. In Job Manager, in the **Page Sets** pane of the **Pages** view, click the **Group by Page Set** icon so that the page sets display by group.

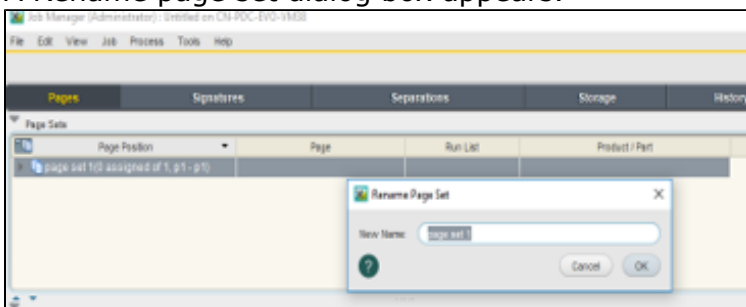

2. Select the page set that you want to rename.
3. From the **File** menu, select **Rename Page Set**.

Or, right-click the page set you selected and select **Rename Page Set**.

A Rename page set dialog box appears.

4. Type a new name:
 - The new name cannot be empty.

- The new name cannot be the same as the existing name.
- The maximum length of the new name should be the same as the maximum length as the original name (the maximum length is 260).

5. Click **OK**.

The page set name is changed.
