

PDF Preflight section of the Loose Page Output process template

Preflight Handling

Only available when a PDF Vector Output To type is selected

Select to determine how Prinergy responds to PDF Preflight+ errors in a page.

Warnings: Ignore—Prinergy completes processing.

Warnings: Warn—PDF Preflight+ warns you of warnings. Warning messages appear in the **Active Processes** pane in Job Manager and in the **History** view.

Errors: Ignore—Prinergy completes processing.

Errors: Warn—Preflight+ warns you of errors. Warning messages appear in the **Active Processes** pane in Job Manager and in the **History** view.

Note: You can select only an equal or more severe behavior for errors as for warnings. For example, if you select **Warn** for **Warnings**, then the choices for **Errors** are reduced to only **Warn** or **Fail**.

Fixed Errors: Ignore—Prinergy completes processing.

Fixed Errors: Warn—Preflight+ notifies you of fixed errors. Warning messages appear in the **Active Processes** pane in Job Manager and in the **History** view.

Notes

- Preflight+, you can stop the generation of failed subpages when you set up your preflight profile to **Fail** on **Errors**. In the refine process template, **Normalize** section, select the **Suppress Generation of Failed Subpages** check box.
- When using Preflight+, an 'X' is never drawn.
- When using Preflight+, the **Fixed Errors** controls are not supported.
- Preflight+ on Output is only available on PDF formats
- Preflight+ on Output is not supported in Insite

JTP

Select the job ticket processor (JTP) that will run the preflight process.

Select a profile to run

Select the Preflight+ profile according to which the preflight process will be run. Then select one of the following options:

- **Analyze**—to run the inspection and identify any problems without fixing the problems
- **Analyze and Fix**—to run the inspection, identify any problems and fix them.

Note: If you select this option but the profile you selected above is set to only analyze, Prinergy will analyze but not fix any problems.

Save report as

Select the file type of the generated report. Select any or all of the options: **PDF**.

- **Include overview**—save a PDF report that contains the overview (a summary of the problems found during the preflight process)
- **Include details**—save a PDF report that contains the details per page (each page with its preflight comments), that is, a copy of the input PDF file with comment annotations to problem elements
- **Copy reports to a remote location** check box, the full report will be copied to the defined remote location before it is deleted from the Prinergy server.

Note: You can access the PDF reports from within Workshop. Right Click the PDF subpage and select **Preflight+ Output Report Viewer**
