

Preserving spot colors during refine

1. Select the input files.
2. Start a refine process on the selected files by dragging the files to the refine process template.
3. Preserve all spot colors by clearing an option in the process template:
 - a. In the Start Process dialog box, click **Edit Process Template**.
 - b. Expand the **Spot Color Handling** section.
 - c. In the **Map Spot Colors** area, clear the **Enable Spot Color Mapping** check box.
 - d. Close the process template.
4. Click **OK** to close the Start Process dialog box.

The refine process occurs. Refined pages are generated.

Tip: You can modify and save the process template before you start. Start the process using the modified process template and do not click **Edit Process Template** in the Start Process dialog box.
