

Linking refined pages

Link the refined pages to versioned pages in order specify the content file for each layer of each versioned page. Linking is performed on the **Link** tab of the **Versioned Pages** view.

Note: You must first add versioned pages before you can link refined pages manually.

The linking task can be performed in a variety of ways. This section describes the different ways you can perform the subtasks:

- [Selecting refined pages.](#)
- [Linking refined pages to the linking table.](#)
