

Final output and plate mapping

When producing final output for LPV jobs, separations that are common to different versions are output only once. Also, base and change content of the same color are merged.

Example

In the nationwide catalog example, because all change content is mapped to black, the C, M, and Y plates are common to all versions. Also, the black separation for each version contains both base black content and change content. For example, for the English East version, the black final output separation contains the English content, the East pricing content, and any base black content. See the following figure for an illustration of how separations are handled.
