

Saving Preps resource files to Prinerger folder

The first time that you set up to use a Preps integration option, move your preexisting folders of Preps templates, marks, and printer files to a special folder on the Prinerger server so that you can use them with integrated Preps.

Alternatively, if you create and edit all impositions from one Prinerger client computer, you can keep the Templates, Marks, and Printers folders on the Prinerger Workshop client computer and confirm that Preps preferences point to these local templates and marks folders.

These files will be available to all Prinerger Workshop clients using Preps.

1. Manually copy all Preps templates, marks, and printer files into the Templates, Marks, and Printers folders in the ... \CreoAraxi\AraxiPreps folder on the Prinerger server.
2. Ensure that the shared ... \CreoAraxi\AraxiPreps folder is mounted to the client computers
3. Configure Preps preferences to point to the Templates, Marks, and Printers folders.
