

# Configuring backups with Prinergy Configuration Backup

If you use Prinergy Configuration Backup, define the servers that will be backed up and the location where the backup is created.

You can add Prinergy secondary servers and render stations to the list. You cannot add tertiary servers.

For non-KMS servers, **Kodak strongly recommends** to add additional network location(s) for backup on the customer network to provide better resiliency against a total loss of the Prinergy server.

1. Click **Tools > Backup** and then click **Settings** to display the Prinergy Configuration Backup - Settings dialog box.

| To                                                                                               | Do this                                                                                                                                                                                                                     |
|--------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Back up the Prinergy and Windows configuration. Otherwise only the Oracle database is backed up. | Select <b>Enable System Backup</b> .                                                                                                                                                                                        |
| Specify backup locations.                                                                        | Click  , and then either click <b>Browse</b> to select the backup location, and click <b>OK</b> , or enter the UNC path. Click <b>OK</b> . |
| Delete a backup location.                                                                        | Select the location and click  .                                                                                                       |
| Specify how many backup sets to keep.                                                            | In the <b>Number of Backup Sets to Keep</b> text box, enter the number of backups you want to keep.                                                                                                                         |
| Select which servers to back up.                                                                 | In the <b>Servers to Backup</b> list, select the servers you want to back up. Clear any server that you don't want to back up.                                                                                              |

2. Click **OK**.
3. Ensure the backup service uses the same user account other Prinergy services. See [Setting logon rights for the Prinergy Araxi and backup service accounts](#).

**Note:** Prinergy Configuration Backup uses the AraxiSystemBackup service.
