

Whats New

New to Prinergy 11.6

- **InSite RBA Data Model - new actions to 'Enable Press Side Proofing' or 'Disable Press Side Proofing'**

New actions in the Insite data model to enable or disable Press Side proofing via RBA. Can be used to enable or disable via RBA rather than manually via a template job or job attributes.

New to Prinergy 11.5

- **Create Preflight+ PDF Report Action**

This new Action allows you to easily attach a report to an email or other appropriate action (i.e. copy or move report to a destination).

Use the Report File Event Property to easily select the PDF report Path Name. Leaving the Destination Directory field blank will correctly use the default path. Note, your refine process template must be setup to include the PDF report format.

Previously to this new action you would have to manually select the report directory.

- **Select Job Filter (This Filter is removed with patch 11.5.0.1 and future versions)**

Flow Control filter to select jobs in Prinergy without using the full job name. Selection criteria can be Begins With, Contains, or Ends With.

Useful to select jobs which may not be named the same way in Prinergy as in MIS to initiate archive or retrieve operations from XML or CSV input.

- **Load Job Action**

Used in conjunction with the Select Job Filter to load a job selected by the filter to perform desired next actions such as archive, imposition output, import/export actions, and final output actions.
