

Sample: Submit to other digital print controllers

Create a rule set that uses the **Digital Submit** event to send files for printing on a digital press. When you drop files onto a digital print device in the Prinergy Digital Submit window, the **Digital Submit** event is generated. Use this event to start a rule that creates the document and submits it to the digital print device along with the JDF process file.

What the rule does

Prepares files for printing and defines the printing parameters for a digital press.

Why it is useful

Automates digital printing of large numbers of files.

Events and actions used

Event	Actions
Digital Submit	Create Document Submit Document (optional) Email

Note: If you want to control when a document is submitted for printing, do not attach the **Submit Document** action. Instead, use the Prinergy Digital Direct software (included with the Digital Print feature) to stage documents and set up printing queues.
Tip: In Rule Builder, you can search for a specific event or action by clicking anywhere on the **Events**, **Flow**, or **Actions** tabs, and typing the name.

Key parameters

Event or action	Parameter
-----------------	-----------

Digital Submit	The Digital Submit event contains the JDF intent information for the job, set by the user in the Digital Direct software. To change the job intent, add the Set JDF Intent action to the Success resulting event of the Create Document action. Note: JDF intent for a job is set in the Digital Submit event and the Set JDF Intent action. JDF intent for a document is set using the Create Document action.
Create Document	Digital Print Queue: Select the digital device. JDF Template: Select the JDF template that you want to associate with documents that are sent to the digital print device.
Submit Document (Optional)	Change Digital Print Queue: Select the device that you want the documents to be printed on (for example, Kodak Digimaster).

Where to enable it

This rule must be enabled across the system. It cannot be enabled for specific jobs.

Other considerations

You must have the Prinergy Digital Print feature installed and configured on your system, including setting up a digital printer workflow processor in Prinergy Administrator and installing the NexPress data model.

Note: For instructions, see the *Prinergy Digital Print Installation and Configuration Guide*, available on Kodak Customer Portal at <https://customer.kodak.com>.
