

Connect to Canon

Set up communication between Prinergy 10.0 and the Canon digital front end [PRISMASync](#) or [EFI Fiery Server 2](#) via [Setup](#). Legacy mode of Adding Connection via Prinergy Administrator is not longer supported in Prinergy 9.0 and above.

Check that Prinergy supports the software version of your digital press front end. See [supported digital presses](#).

Give Prinergy access to the Canon digital front end so that Prinergy can track audits. On the Canon digital front end, add the user account ARAXI. The default password for the Araxi account is ARAXI.
