

Highlighting objects set to overprint

Highlighting objects currently set to overprint increases the visibility of overprints in the PDF file, so that you can check and/or change the overprint status for objects more easily.

1. On the lower toolbar in the Properties Editor/Viewer, click the **Highlight objects set to overprint**  button.
All overprinted objects appear in the PDF in the highlight color that you selected when setting up PDF Trap Editor.
2. When ready, click the **Highlight objects set to overprint** button again to turn off the highlighting.
