

Hiding all traps

You can hide all traps to see how the PDF page would look if untrapped. This feature is useful if a current trap obscures an object on the page. This feature cannot be used with the **Highlight traps** option.

1. On the lower toolbar in the Properties Editor/Viewer, click the **Hide traps**  button.
No traps are visible in the PDF.
2. When ready, click the **Hide traps** button again to see all traps.
