

Hiding transparent objects

When you set an ink to transparent while setting up the PDF file, the objects in that ink are visible but not selectable in PDF Trap Editor/Viewer.

1. On the lower toolbar in the Properties Editor/Viewer, click the **Hide transparent objects**

button.

Objects that are in transparent ink no longer appear in the PDF.

2. When ready, click the **Hide transparent objects** button again to see the objects that are in transparent ink.
