

Trapping only common object borders

The **Only common object borders** check box is available in the Trap Selection dialog box only.

- When the **Only common object borders** check box is selected, and objects selected—the tool traps only those boundaries shared by the selected objects.
- When the **Only common object borders** check box is cleared, and objects selected—the tool traps all of the selected object's borders.

Note: The **Only common object borders** option does not apply in the following cases:

- When you are trapping one selected object
- When you are regenerating a selected trap or traps
- When you are generating a new trap for selected borders
