

Entering and using a default trap set

You can create a default trap set and make it available to PDF Trap Editor. When you open an untrapped PDF file, and then open a trapping dialog box, the plug-in will automatically load the trapping parameters from the default trap set into the trapping dialog box.

1. Create and save preferred trap settings in a trap set.
2. In Acrobat versions 7 and 8:
 - In Mac OS, select **Acrobat > Preferences > Kodak PDF Trap Editor**.
 - In Windows, select **Edit > Preferences > Kodak PDF Trap Editor**.
3. In the Preferences dialog box, in the **Default Trap Set** box, type the full path name for the saved trap set. Alternatively, click **Browse** and locate the saved trap set.
4. Click **OK**.
5. Open a file that was refined and color-matched, but not trapped, in Prinergy.
6. In PDF Trap Editor, click **Trap page**, or select items and click **Trap the selection**. In the trapping dialog box, the Trap Set status shows as **Default**.
7. Check the trapping options, and apply the new trap set to the PDF.

The trapping parameters are applied to the page or selection. The Trap Set status shows as **From PDF file**.
