

Welcome to the Kodak Prinergy Virtual Proofing System 3.0 software

Prinergy Virtual Proofing System (VPS) is software that displays pages and impositions in full color on the computer monitor. You can save time and money by using the Prinergy VPS software to find errors before plates are made.

Use the Prinergy VPS software to check imposition, registration, layered PDF versioning, trapping, backup, fonts, image placement, and color breaks.

Kodak has developed a new version of VPS called "**VPS+**" (**VPS Plus**) that is compatible with the latest Mac OS systems. This version of online help refers to the original version of VPS which is now referred to as "**VPS Classic**".

See [VPS+ Online Help](#) for more information on the new version.
