

Zooming in and out

You can zoom in and out in several different ways to achieve the view you want.

To do this	Take this action
To see the image at a particular zoom level (from 8:1 to 1:512)	Select the particular zoom level from the Zoom menu or use the shortcut key for that zoom level, if a shortcut key is available.
To zoom in one level at a time	From the Zoom menu, select Zoom In: • In Mac OS, press ⌘ + (plus sign). • In Windows, press Ctrl + (plus sign). Or From the Tools menu, select Zoom tool . Move the magnifying glass to the area you want to zoom in on, and click. When the other tools are active: • In Mac OS, hold down the ⌘ key to enable zooming in. • In Windows, hold down Ctrl to enable zooming in.
To zoom out one level at a time	From the Zoom menu, select Zoom Out: • In Mac OS, press ⌘ - (minus sign). • In Windows, press Ctrl - (minus sign). Or From the Tools menu, select Zoom tool, and hold down the shift key . Move the magnifying glass to the area you want to zoom out on, and click. When the other tools are active: • In Mac OS, hold down the ⌘ and shift to enable zooming out. • In Windows, hold down Ctrl+shift to enable zooming out.

To fit the entire image into the window

From the **Zoom** menu, select **Fit To Window**:

- In Mac OS, press ⌘ 0.
- In Windows, press Ctrl+0.

You can set the navigation preferences so that the image will fit to the window whenever a job opens.
