

Changing transparency

You can change the transparency by performing one of the following:

To do this	Take this action
To make an ink transparent	In the Separations palette, move its ink transparency slider to the left. If the Separations palette is not currently displayed from the Window menu, select Show Separations Palette .
To make a surface transparent	In the Separations palette, move the transparency slider for that surface to the left.
To make the foreground surface more opaque (less transparent)	From the Sheet menu, select More Opaque . • In Mac OS, you can also press⌘] . • In Windows, you can also press F10 or move the front surface slider in the Separations palette to the right. The opacity (transparency) changes in one percent increments each time the menu item is selected, or the shortcut key is pressed.
To make the foreground surface less opaque (more transparent)	From the Sheet menu, select Less Opaque . • In Mac OS, you can also press⌘ [. • In Windows, you can also press F9 or move the front surface slider in the Separations palette to the left. The opacity (transparency) changes in one percent increments each time the menu item is selected, or the shortcut key is pressed.
To make an ink opaque	In the Separations palette, click the Transparency/Opacity icon. If the Separations palette is not currently displayed from the Window menu, select Show Separations Palette .
