

Setting navigation preferences

- In Mac OS, from the **Prinergy VPS** menu, select **Preferences**, and click the **Navigation** tab.
- In Windows, from the **Edit** menu, select **Preferences**, and click the **Navigation** tab.

Setting	Description	
Navigation palette colors		
Outline	Set the color used to outline the area of the image that is displayed in the main window. Move the slider to change the transparency of the outline color. The image at the right of the Navigation tab shows your selections. In the sample below, the outline is yellow. 	
Fog	Set the color of the area of the Navigation palette that is outside the outlined area. Move the slider to adjust the transparency of the fog. The image at the right of the Navigation tab shows your selections. In the sample above, the color of the fog is white.	
Zoom to fit window when job opened	Select this option to have the entire image fit into the main window whenever a job opens.	
Rotate image upright when job opened	Select this option so that a non-upright image will automatically rotate into its upright position in the main window whenever a job opens.
