

Tool shortcut keys

When one tool is active, use the following shortcut keys to enable a different tool. For example, when the **Measure** tool, **Densitometer** tool, or **Zoom** tool is active, hold down the space bar to enable panning. When you let go of the space bar, the original tool becomes active again.

Note: The **Densitometer** tool does not have a shortcut key. However, when the **Densitometer** tool is active, the shortcut keys outlined in the following table can be used to temporarily switch to another tool. Once the shortcut key is released, the **Densitometer** tool is restored to its previous active mode. If the **Densitometer** tool is active with a marquee and you temporarily switch to another tool using the menu or toolbar (instead of the shortcut keys), when you return to the **Densitometer** tool, it is restored to its default mode, that is, measuring the ink density of a single pixel.

To enable	Mac OS shortcut key	Windows shortcut key
Zooming in 	⌘	Ctrl
Zooming out 	⌘ Shift	Ctrl+Shift
Measuring	Option To constrain the Measure tool to horizontal or vertical measurements, hold down the Option and Shift keys.	
Panning	Space bar	Space bar
