

# Prinergy product family

Prinergy Workflow is a Prinergy product family, which includes:

- Kodak Prinergy Workflow software—a full-featured Prinergy system for commercial and publications printers who need page processing, imposition, and film-making or plate making. Prinergy Workflow is also designed for offset, flexographic, and gravure packaging printers.
- Kodak Prinergy Evo software—an entry-level, PDF front-end, workflow solution targeted at 4-up and smaller 8-up commercial print market. Prinergy Evo offers the same PDF processing that Prinergy Workflow does, but without job context.
- Kodak Prinergy Digital Print—a set of production tools that you use to schedule, submit, and monitor the printing of documents in a digital printing environment.
