

InSite workflow

InSite shows the Prinergy Workflow system's digital masters and jobs. When PDF files are uploaded, InSite can be configured to automatically send the files to Prinergy Workflow for processing (refining). When Prinergy finishes refining, the pages automatically appear in InSite without any action from Prinergy. For monitor proofing, the color target of the Prinergy digital master is configured in InSite. InSite can be installed on a standalone server (most commonly) or on the Prinergy primary server.
