

Virtual Proofing System software

You can use Kodak Virtual Proofing System to view a soft proof of a job on your client computer. You can view single pages or imposed pages. Use Virtual Proofing System to check backup, measurements of gutters, bleeds, registration, marks, color breaks, trapping, and layout.

To view a virtual proof, select the elements you've generated the VPS files for, right-click, and select **Open VPS Files**.

Note: For information about using Virtual Proofing System, see the *Virtual Proofing System User Guide*.
