

Exporting jobs

If you want to send the job or part of the job to a remote Prinergy system, export the job. Prinergy creates a .zip file containing many elements of the job. Job history and original input files are not transferred in the .zip file.

Export process templates control export options, such as the location of the export.

To export a job:

1. In Job Finder, select the job, and from the **File** menu, select **Export Job**.
2. In Job Manager, from the **File** menu, select **Export Job**.
