

Downloading a low-resolution JPEG version of an element

You can download a low-resolution JPEG version of an element from a project or library. If the element has multiple revisions, you can download the latest revision only.

Requirements: You must have a project or library role that includes the Download JPEG user right.

1. In the **Elements** view, select the element or folder that you want to download.
2. Select **Download > JPEG Image**.
The Downloading element(s) window appears.
3. Select the resolution for the JPEG file.
4. Click **Download**.

Note: According to the browser settings, the file is downloaded to the default location and /or appears in the browser window. Configure the browser to specify the download location and the way to handle download files.

5. When the download is complete, click **Close**.
