

Changing to a different revision

When a file has multiple revisions, you can change the revision that you are viewing in Smart Review.

Note: In a collaboration session, only the session controller can change the revision that is displayed.

1. Open the file in Smart Review.
If the file has multiple revisions, a list above the image displays the current revision and its revision number—for example, `sample.ai (r2)`.
2. In the list, select the revision that you want to view.
