

Comparing two pages in a multipage file

1. In the **Files** list, click the name of the multipage file whose pages you want to compare. The **Files** list displays all of the pages in the multipage file. The first page is selected by default.
2. Click the first page that you want to compare.
3. Click **Compare View** .
The viewing area is split into three sections. The selected page appears in both the left and middle sections.
4. Right-click (Ctrl+click on a Mac computer) the second page that you want to compare and select **Assign to Middle View**.
Smart Review compares the two images, generates a comparison image, and displays it in the right section.
5. View the comparison image.
Tip: If the images being compared are identical except for their page dimensions or positioning, you can use the Align Images feature to align a specific point on one image with a specific point on the other image.
6. When you are finished comparing the two pages, click **Single View**  to return to viewing one file at a time.
