

Managing color targets

You can make all color targets or specific color targets available to customers. You can specify a default color target for the customer. When the customer creates a non-color-approval task, the default color target is automatically associated with the task and applied to the task's elements in Smart Review.

Requirements: You must have a customer role at the customer level that includes the Modify Customer user right.

1. Select a customer and select **Customer > Manage Color Targets**.
2. In the Manage Color Targets for <Customer> dialog box, select the check box next to each color target that you want to make available for the customer.
3. If you want a default color target to be applied to non-color approval tasks for the customer, select a color target in the **Default Color Target** list. Only color targets that you make available for the customer are available for selection.
4. Click **Update**.
