

Setting gutters between ganged page rows

1. Select a page to use as the reference for the pages for which you want to set common gutters.
2. Optional: Lock the page into position.
3. Drag a marquee around all of the pages that you want to arrange in a uniform layout, including the page that you will use as reference.
4. To set the vertical and horizontal gutters for all of the selected pages, edit the reference page's gutter text boxes.
For example, if you are using the lower-left page as the reference, you will edit its top and right gutters.
