

Connecting a printer for direct printing

To print directly to a device such as a laser printer on your network, define the connection in its media configuration.

Requirement: The printer must already be installed and selectable on your computer.

1. In the **Media** list, right-click **Generic PostScript Printer**, and select **Edit**.
2. In the Media Configuration dialog box, click **Connection**.
3. In the Connection dialog box, select the printer.
4. Click **Test Print**.
5. After the test page prints, click **OK**.

Tip: If a test page does not print, troubleshoot the printer and operating system setup.
