

Creating a mark group

You can create a group of marks that can be added and automatically positioned at the same time.

Requirements: Create all the mark resources that you want to place into a group. For example, a mark group might contain a flat identifier text mark, fold mark, crop marks, color bar, and custom registration marks for your press.

1. Create a new subfolder in the SmartMarks folder, with a name to identify this mark group.
2. Drag or copy the SMK files for this group into the new folder.
