

Licensing Control dialog box

To activate a software-based license, you provide the serial number in the Licensing Control dialog box that appears when you first start the new software. If the installation is licensed by a workflow server, you can set the default floating-license type, and view who is currently using each license.

When the software is running, you can use Command/Ctrl+U to access the Licensing Control dialog box, or select **Preps/Edit > License**.

Software License

Select for software-based licensing.

Licensed to, Company

Provide the names.

Serial Number

Provide the serial number for your license that you received from Kodak, either in an e-mail message or on Kodak Customer Community at <https://customer.kodak.com>, navigate to **Product Licensing Activation System (PLAS) > View registered products**. The serial number contains a combination of capital letters and numbers and is not case-sensitive.

License Key

After you perform the [procedure to retrieve your license](#), your new license key appears in this box.

Prinergy Floating License

Select for installations in workflow systems that use server-based licensing.

License Server

Select or specify the host name or IP address of the workflow server that manages the floating licenses.

Licenses

Select the default license type, if more than one license type is available in your system.

Type

Lists the available license types.

Available

Lists the number of floating licenses that are currently available for each type.

Total

Lists the number of installed floating licenses.
