

Compare...

The **Compare** function can be used to compare pixel differences between one separation and another separation. File sizes (in pixels) must be identical to be compared.

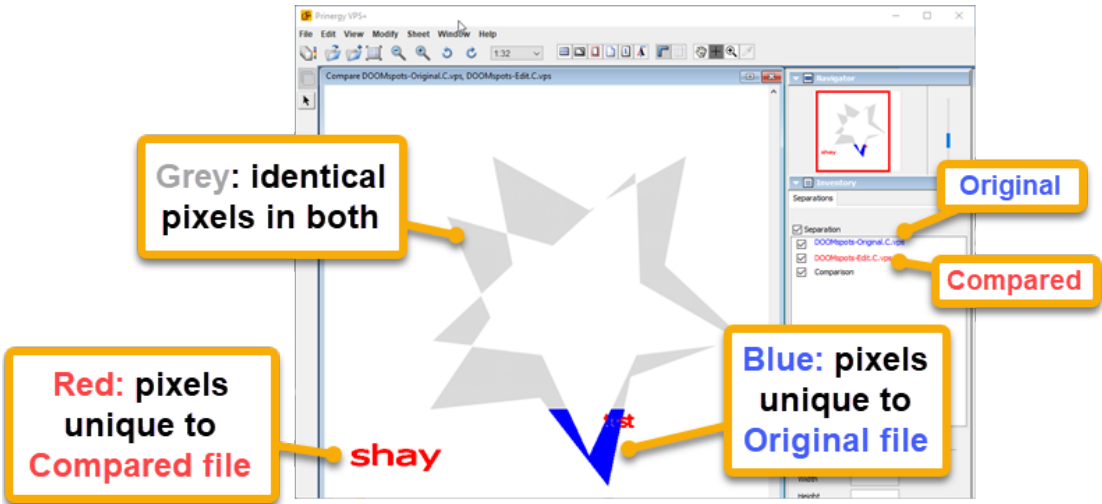

You can also compare one set of separations to another set, provided that you compare the same number of separations.

First **Open** the separation (or set of separations) you wish to compare.

The choose **Edit > Compare...** or click the **Compare icon**  in the Toolbar.

The original file name will be identified in **Blue** under the **Inventory > Separations** list, and the compared file name will be identified in **Red**.

The display shows all pixels that are identical in each file as **Gray**, pixels unique to the original file as **Blue** and pixels unique to the compared file as **Red**.

You can use the following keyboard shortcuts in Compare Mode:

Action	Mac	Windows
Compare Mode		
Select First Separation	Command + 1	Control + I
Select First Separation	Command + 2	Control + I
Toggle Compare On/Off	Shift + 3	Control + 3
