

Viewing files and file information in Preview mode

You can use features from the [toolbar](#) and various menus to view and gather information about files in Preview mode.

From the toolbar:

- [Zooming in and out of an image area](#)
- [Measuring the distance between two points in the image](#)
- [Viewing information related to screening](#)
- [Comparing TIFF files](#)

From the Modify menu:

- To rotate a previewed TIFF file and save your changes, from the **Modify** menu select **Rotate**, and then select the required rotation: **0°**, **90°**, **180°**, or **270°**.
- To flip a previewed TIFF file and save your changes, from the **Modify** menu select **Flip**, and then select **Horizontal** or **Vertical**.
- To modify a previewed TIFF file with inverted colors and save your changes, from the **Modify** menu select **Invert**.

From the File menu:

- [Viewing file information](#)
- [Creating a Proof Report for the previewed file](#)
