

Working with preflight

For files that have undergone a preflight check in Prepress Portal, you can review preflight errors, warnings, and information in Smart Review.

1. In Smart Review, on the right pane, click **Preflight**.
In the **Preflight** panel, you can view a list of the preflight errors, warnings, and information.
2. To zoom to a listing, select the **Auto Zoom to Selection** check box, and click a listing.
The view zooms to the relevant area. The relevant area is delimited by a color-coded bounding box: red for errors, yellow for warnings, or blue for information.

Note: In addition to checking the **Preflight Notification** checkbox in the Upload Processing Rule in InSite Prepress Portal, you must also save the report as **XML** in the Prinergy Refine Plan > **Preflight** section for InSite Smart Review to see the Preflight information. See Prinergy's [PDF Preflight section of the Refine process template](#) for more information.
