

Displaying and hiding separations

Note: In a collaboration session, only the session controller can display and hide separations.

1. In Smart Review, on the right pane, click **Separations**.
Each separation that makes up the current image is listed beside a check box.
In Spread View and Compare View, the two sets of colors are grouped into colors that are common to both files and colors that are unique to each file.
2. Select the check boxes for the separations that you want to display, and clear the check boxes for the separations that you want to hide.
Note: Select the **All** check box to display all separations or clear this check box to hide all separations.
3. Click **Apply**.
