

You can print a page from Smart Review to a local printer.

You should print pages to a local printer for content proofing purposes only; printing pages to a local printer will not output color-accurate proofs. To view a color-accurate version of the page, view a full-screen preview of the file with Matchprint Virtual enabled on a calibrated, color qualified monitor.

Annotations that you have added in Smart Review do not appear on the printed copy.

Note: The output from the print option is not intended to be used as a hard contract proof of the element or page.
