

Test that a theme and a domain name are correctly associated.

1. On the server, locate %windir%\System32\drivers\etc.
2. Using Notepad, open the hosts file.
3. On one line, type the server IP address and DNS name. For example: 10.1.66.68
abcgraphicdesign.com
4. Save the file.
5. Point your browser to <http://abcgraphicdesign.com> to confirm that the theme displays.
6. In the hosts file, remove the entry that you added in step 3.
