

Running the InSite Configuration Utility

Note: If the Prinergy Workflow software was upgraded—for example, you completed a Prinergy upgrade, rehost, or migration—run the InSite Configuration Utility (ICU) before you upgrade the InSite server.

1. On the Prepress Portal or PressProof server, open a command-prompt window.
2. Type ICU and then press Enter.
The **InSite** and **w3svc** services stop, and the ICU wizard appears.
3. Click **Next**.
4. On the Prinergy primary server Info screen, confirm the name and IP address of the primary server. If incorrect, type the correct server name and/or IP address.
5. Click **Next** verifying the settings are correct, until the Configuration Summary screen appears.
6. Click **Apply**.
7. When configuration is finished, click **Next**, and then click **Close**.
8. Click **Close**.
