

Enabling the use of multiple monitors

Note: macOS provides an option to auto-hide half of a window if that window is displayed on dual monitors. The default setting for this option is **On**.

To turn this option off and enable the use of multiple monitors in PressProof, follow these steps:

1. Choose **Apple > System Settings**.
2. Select **Desktop & Dock**.
3. Scroll down to **Mission Control**.
4. Turn on the **Displays have separate spaces** switch.
