

Installing PressProof

Install the PressProof client software on each Mac computer that will be used to view surfaces in the pressroom.

Requirements:

- The Matchprint Virtual calibration software must be installed on each PressProof viewing station.
- You must know the Administrator user name and password for the PressProof (or Prepress Portal) server.

1. On the Mac computer, choose **Go > Connect to Server**.
2. Type `smb://<ServerIPAddress>`, where `<ServerIPAddress>` is the IP address of the PressProof (or Prepress Portal) server.
3. Click **Connect**.
4. Type the administrator user name and password for the PressProof (or Prepress Portal) server. (The user name is usually ARAXI).
5. In the SMB Mount dialog box, select **Installers** as the share.
6. Click **OK**.
7. Open the PressProof folder, double-click the Kodak PressProof.dmg file, and follow the instructions (You must have the Mac Administrator's user name and password to install PressProof client).

Tip: If users cannot access PressProof viewing client after you install the PressProof software, you may have exceeded the allowed number of PressProof viewing stations.
