

Setting up the connections

Monitor's port	Cable types	Mac ports
USB-C (Thunderbolt) port on a monitor 	Thunderbolt 3 or 4 (USB-C) Cable. Depending on the monitor, you may also need a signal cable (below), with an adapter for USB-A to USB-C to the Mac. 	Thunderbolt (USB-C)  or 
DisplayPort on a monitor 	Thunderbolt 3 / 4 / 5 (USB-C) to DisplayPort Cable 	Thunderbolt (USB-C)  or 

DisplayPort on a monitor

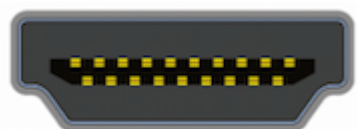

DisplayPort to MiniDisplayPort cable

MiniDisplayPort on M.

HDMI port on a monitor

HDMI cable

HDMI port on Mac

USB Signal port on a monitor

USB Signal cable

Note: The USB cable is required for use with Matchprint Virtual as it supplies communication from the monitor to our software, unless the monitor and Mac support the Thunderbolt 4 (USB-C) to DisplayPort 1.4 Cable .

USB port on Mac

There is a newer version of the cable, with the Upstream end (USB-B) connecting to USB-C.

Finally, some newer monitor models do not need this cable, as data can be transferred back to the monitor through the DisplayPort cable or USB-C cable. Consult your monitor manual for details. In general, if there is a USB-B (upstream) USB port on your monitor, then it will need to be used.
