

Set a monitor calibration reminder

There are several reasons why a calibration reminder might appear.

You can choose the number of days up to 14 for the calibration to remain valid.

When the calibration has expired, a reminder will appear, indicating that you need to calibrate to ensure that the monitor's color and luminance are continuing to meet the specifications in the reference profile for the monitor to achieve excellent color match.

1. Perform one of the following actions:

- Click **Open App** to open the MV Calibrator and use **CALIBRATE** to confirm that the monitor is still accurate.
- Click **Cancel** to ignore and the reminder will appear again in an hour.
