

Applying ColorFlow curves and making curve adjustments

If a printing plate has imaged and run on press, but the press is not printing with the desired response, you may need to recreate the plate using a different ColorFlow curve channel for one or more separations. You can also make curve adjustments to the assigned ColorFlow curve channel. These adjustments, made on-the-fly in the Tonal Control dialog launched from the Start Process dialog box, are appended to the ColorFlow calibration curves and have no effect on ColorFlow colorstores. This feature is only available in Prinergy Connect and Powerpack.
