MODULE 4: The Assembly view

Module summary

After completing this module, you should be able to:

- Create a job with product intent
- Move, combine, and split sections
- Change binding styles
- Add a new product and part
- Adjust section properties
- Work with JDF jobs

Use this view to provide the product intent for a customer job, which can include multiple products and parts, and mixed binding styles. You can also interactively plan the binding assembly of each product's parts and sections, and autogenerate press runs based on your planned details.
