

Edit the rule set - Approve a PDF page

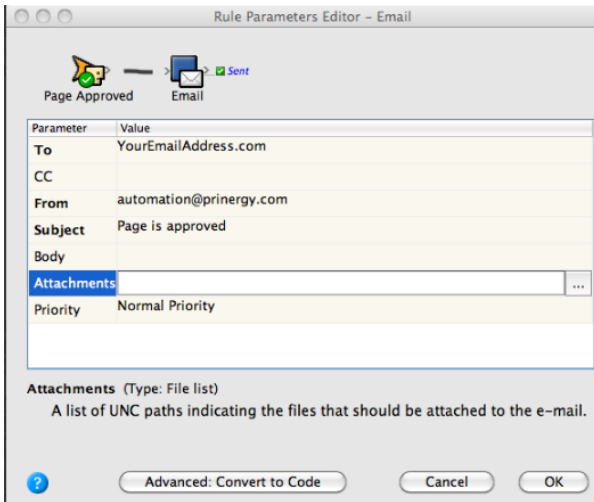

In this task, you'll use Rule Builder to build two rules that will be used for the approval or rejection of refined PDF pages. Both rules will contain e-mail actions. The rules will work together and will be triggered by events that occur in Prinergy Workshop.

This first rule instructs RBA to send an e-mail containing an attached PDF page when the PDF page is approved in Job Manager.

1. On the **Events** tab, locate **Page Approved: Prinergy Events > Page Events > Page Approval Changed > Page Approved**
2. Drag the event onto the workspace.
3. On the **Actions** tab, locate **Email: System Actions > Email**.
4. Drag **Email** to the **Action** icon (center of the green box).

5. Double-click the red line separating the event and the action.
6. In Rule Parameters Editor, in the **To** parameter row, under **Value**, click the red text **(Enter a Value)**. Then, to open the **Email : To** parameter value editor, click the **Edit Value (...)** button on the right.
7. Click the **Variables** tab.
8. Expand the **Global Variables** list.
9. Select the **prepress_operators_emails** variable, and click **OK**. The **prepress_operators_emails** variable appears as the **To** parameter. Its format is **%%\$prepress_operators_emails%**, where the leading and trailing **%** characters are used to delimit the value as a property or variable reference and the **\$** character indicates that it is a global variable reference. When the action executes the value of the global variable will be retrieved passed to the action.
10. Click the red text **(Enter a Value)** in the **Subject** box, and type a subject line.
11. Click in the **Body** box, and type the text that you want to appear in the body of the e-mail.
12. Click in the **Attachments** box. Click the **Edit Value** icon (...) to access the Parameter Value dialog box.

13. In the Parameter Value dialog box, click the **Event Properties** tab.
14. Select **Event Properties** > **Pages** > **Main PDF File**.

15. Click **Add to List**. Click **OK**.
16. In Rule Parameters Editor, click **OK**. View the rule.
