

Edit the rule set - Reject a PDF page

This second rule instructs RBA to send an e-mail notification when a PDF page is rejected in Job Manager.

1. On the **Events** tab, locate **Page Rejected: Prinergy Events > Page Events > Page Rejected**
2. Drag the event onto the workspace.
3. On the **Actions** tab, locate **Delete Page: Prinergy Actions > Page Actions > Page Approval Changed > Delete Page**
4. Drag **Delete Page** to the action icon (center of the green box).

5. On the **Actions** tab, locate **Email: System Actions > Email**
6. Drag **Email** to the resulting **Deleted** event.
The **Deleted** icon represents a resulting event linked to a completed action, in this case, the deletion of a PDF page.

7. Double-click the red line separating the **Deleted** event and the **Email** action.

8. In Rule Parameters Editor, in the **To** parameter row, under **Value**, click the red text **(Enter a Value)**. Then, to open the **Email : To** parameter value editor, click the **Edit Value (...)** button on the right.
9. Click the **Variables** tab.
10. Expand the **Global Variables** list.
11. Select the **prepress_operators_emails** variable, and click **OK**. The **prepress_operators_emails** variable appears as the **To** parameter. Its format is **%%\$prepress_operators_emails%**, where the leading and trailing **%** characters are used to delimit the value as a property or variable reference and the **\$** character indicates that it is a global variable reference. When the action executes the value of the global variable will be retrieved passed to the action.
12. Click the red text **(Enter a Value)** in the **Subject** box, and type a subject line.
13. Click in the **Body** box, and type the text that you want to appear in the body of the e-mail.

Rule Parameters Editor - Email 2

Delete Page Deleted Email 2 Sent

Parameter	Value
To	YourEmailAddress.com
CC	
From	automation@prinerger.com
Subject	Page rejected
Body	Please contact xxx@email.com for further info ...
