

Activity 8: Review questions

1. If you have a set of files, some of which need a particular action and some of which do not, would you use a branch or a filter?
2. If you manually change the text in a rule set action or event, how can you identify the original text?
3. Which kind of timer flow action would you use if you want an action to occur on a specific date and time?
4. Why is it a good idea to use a delay parameter for **Split** and **Repeat** flow actions?
5. If you used a **Split** flow action with a delay parameter of 30 minutes, and did not also add a **Next** action, what would happen if the action took only 20 minutes?
6. Things to think about—What kinds of flow actions might you need in your prepress environment?
