

Create a job hot folder and connect it to the enabled rule set

1. Create a job hot folder in the current job.
2. Select the **Add and Process Files** option.
3. Expand **Automation: Enabled Rules** and select your enabled rule set <XX> **_Rule_Set_XML_Workflow**.

4. In the Manage Hot Folders window, verify that your rule set is connected to the hot folder.

5. View the Job sub-folder with newly created hot holder. Note that the hot folder is named after the rule set.
