

Set the Otherwise parameter

1. Scroll down and expand the **Otherwise (if none of the above)** case. This is to accommodate the case where the group name is not one of the expected values.
2. Configure the **To** parameter by entering `prepressmanager@mycompany.com`

The screenshot shows a table with two columns: 'If this is true...' and 'Then "To" is...'. The table has three rows for specific group names and one expanded row for the 'Otherwise' case.

If this is true...	Then "To" is...
3 Group Name for this execution is: Sam	sam@mycompany.com
4 Group Name for this execution is: Bill	bill@mycompany.com
5 Group Name for this execution is: Ken	ken@mycompany.com
Otherwise (if none of the above):	Otherwise Value

Under the 'Otherwise (if none of the above):' section, there are two radio buttons. The first is selected and labeled '"To" Value: prepressmanager@mycompany.com'. The second is labeled 'Fail the action. Exception message:'.

The Rule Parameters Editor should look like this:

The screenshot shows a window titled 'Rule Parameters Editor - Output Success'. At the top, there is a flow diagram with a box labeled 'Perform Final Output' and a box labeled 'Output Success'. Below the diagram is a table with parameters and their values.

Parameter	Value
To	6 Possible Values
CC	
From	automation@prinergy.com
Subject	Final Output Process Succeeded
Body	
Attachments	
Priority	Normal Priority

3. Save and hot swap the rule set with the one that is currently enabled.
4. Run the enabled rule set in the Debugger.
